Please consider for class(es): 428?

Examiner R. Harrison does not want this case. The only reason he had parent was because of a case shortage. This art is not in TC 16.00, but I am not sure where it goes. Using boric acid to absorb heat thereby preventing an increase in temperature of a heat sensitive device.

5 Response:

Could 428 take this? Some structure (boric acid is on a support) but I don't think its enough for 16.5 or 174. Thanks

Kate
